**Jetform Unveils Strategic Web Initiatives with New E-Process Framework,
Web Applications and E - Forms Portal**
PR NEWSWIRE
February 04, 1999
JOURNAL CODE: WPRW LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 1409

Company Outlines Comprehensive Blueprint To Aggressively Exploit
Internet Market Opportunities For E-Processes
Announcement Summary

JetForm announced a four-part **Internet** strategy:

- A new generation of Web-based products based on a series of technology developments in FormFlow, InTempo and **JetForm** Central.
- A new, open framework that incorporates e-form, workflow, and output tools into a comprehensive environment for rapid application development and deployment.
- A range of packaged e-process applications that exploit this framework by targeting customer, employee and partner facing processes.
- A new **e - forms** Web portal that will provide a library and clearinghouse for tens of thousands of electronic forms for public and business use.

OTTAWA, Feb. 4 /CNW-PRN/ - Responding to market opportunities that dovetail with its technology strengths and competencies, **JetForm** Corp. (Nasdaq: FORMF, TSE: JFM), the global leader in workflow and electronic forms solutions, traditionally deployed in client/server environments, today announced a comprehensive **Internet** strategy to enable Global 2000 organizations to deploy "e-processes." This new focus further positions **JetForm** to extend its market leadership to the burgeoning e-business marketplace.

As an evolutionary change for **JetForm**, e-processes uses the Web platform to efficiently, effectively, and securely automate existing and new business processes through the Web to serve customers, partners and employees. The new strategy also targets the needs of online business leaders such as Amazon.com, Yahoo!, America OnLine and eBay that are driven by Web customer interaction. In addition, it allows **JetForm** to reach untapped markets for both products and services.

"Today's announcements are the result of months of careful planning, significant investments and intense activity," said John Kelly, president and chief executive officer for **JetForm**. "We have been following an internal plan that was expressly created to combine our core competencies in automating business processes with the tremendous opportunity and

compelling characteristics of the **Internet** platform.'

PART ONE: NEXT-GENERATION WEB PRODUCTS

Over the last two years **JetForm** has refocused each of its core products for the Web. In the coming months, **JetForm** will complete the delivery of these products as mission critical ``engines'' for integrating legacy systems with Web architectures as well as automating new e-processes.

- **e - forms Engine** - FormFlow 99, the company's powerful thin client **e - forms** solution for the Web is already available. Designed to enable

organizations to distribute rich, intelligent, component-based **e - forms**

through the Web, FormFlow 99 supports a wide range of e-commerce applications. FormFlow 99 is the only web **e - forms** product that combines zero administration and support for digital signatures in a 32-bit browser environment.

- **e-process Engine** - InTempo, the company's Web-based enterprise workflow

solution has been significantly enhanced and extended, expanding the range and reach of possible applications for customers. With this redesign, InTempo becomes an ideal platform for enterprise and inter-enterprise Web-based automation. InTempo uses a rule and role-based engine to dramatically reduce the time and expense associated with processes by automating the flow of information between - requesters, approvers and fulfillers.

- **Web Output Engine** - Leveraging **JetForm** 's leading expertise in the area

of customer focused document output, **JetForm** 's new Web output capability will allow organizations to rapidly extend core business applications to deliver dynamic, quality customer-focused documents through the Web, such as in electronic bill and statement presentment applications. Additionally, complex transactions such as the

processing

of loan applications can have the required documents automatically assembled for web distribution.

PART TWO: NEW E-PROCESS APPLICATION FRAMEWORK

JetForm 's new Web Application Framework allows organizations and integrators to create applications that automate their customer-facing, partner-facing and employee-facing processes. The Web Application Framework incorporates **JetForm** 's e-form, workflow and output tools, along with a complete methodology into a comprehensive environment for rapid application development and deployment.

One of the key technologies of the Web Application Framework is **JetForm** 's new ``Universal Profile'' concept. With the Universal Profile, the user fills out personal information only once. Subsequently, whenever a form calls for information that the user has previously provided, it is automatically populated from the Universal Profile. This feature simplifies and speeds common transactions and eliminates repetitive re-keying.

The other key technology of the Web Application Framework is **JetForm** 's new XML Forms Architecture (XFA). XFA is the **Internet** 's first open standards-based forms architecture that embraces all aspects of process automation - the capture, presentation, movement, processing and output of information.

Based on XML, a public standard that was approved by the World Wide Web Consortium (W3C), **JetForm** 's XFA specification provides a standard and common communication method for many different applications, such as enterprise resource planning (ERP) and customer relationship management (CRM) systems. **JetForm** is an active member of the W3C and will submit the XFA specification, the first version of which was created in May 1998, to leading standards bodies within the next few weeks.

PART THREE: PACKAGED E-PROCESS APPLICATIONS

Using its new framework, **JetForm** is developing a series of e-process applications - configurable business solutions that leverage the **Internet** and that automate customer-facing, partner-facing and employee-facing business processes. Unlike single-purpose packaged applications, those built with **JetForm** 's Web Application Framework provide multi-purpose applicability, better reusability, greater extensibility, stronger workflow functionality and a superior return on investment. They will be easier and

faster to customize, deploy and maintain than single purpose applications.

A STRATEGIC FOCUS ON CUSTOMER FACING APPLICATIONS

JetForm 's strategic focus will be on customer-facing e-process applications that integrate all aspects of a customer encounter on the Web with appropriate internal processes. A customer example of the value of **JetForm** 's technology in this area is Auction Universe - an online auction company that exemplifies the explosive growth of online business - needed an e-process application to streamline its customer service operations. Using **JetForm** technologies, the company created a customer-inquiry management application to provide enhanced customer service while improving the ability of its employees to handle the growing volume of customer requests.

"Web customer encounters are creating a new category of needs in the growth of electronic customer relationships," said Walid Mougayar, a noted e-business consultant and best-selling author of Opening Digital Markets. "For Net-savvy organizations, providing the best customer online experience is now a primary goal. As companies increasingly depend on electronic customers, they need to integrate and rapidly scale all of these encounters into actionable processes inside the organization. **JetForm** 's e-process strategy addresses this opportunity head-on and capitalizes on a top priority: building customer loyalty and increasing customer satisfaction on the Web."

Leveraging its historic strength in employee-facing processes - such as expense reports, purchase requests, and leave requests - **JetForm** will soon deliver a suite of configurable applications that facilitate employee self service, enabling human resource departments to focus on more strategic issues.

"The applications we build will embody the best practices of many of our customers," said Kelly. "And since they will be built by **JetForm** using our own tools and Application Framework, customers will have access to the same development suite as the **JetForm** development organization for easy and fast modification and tailoring."

PART FOUR: NEW E - FORMS PORTAL

There are thousands of electronic forms available to the public on various Web sites - but no single, searchable clearinghouse. To encourage broader adoption of electronic forms by consumers, SOHO users, and small-to-medium enterprises, **JetForm** is creating the ultimate source for forms on the Web - a comprehensive library of tens of thousands of electronic forms, intelligently classified by category and keyword.

This portal will allow users to quickly locate and download individual forms or collections of related forms that can be either filled electronically and printed or printed and filled by hand. The portal will provide a broad range of **government** compliant forms, business forms and will deliver online customized forms. What's more, **JetForm** 's Universal Profile feature will appropriately auto-populate these forms for users as well.

Following on its recent announcement to provide citizens with access to public-use Web forms, and in support of the launch of the **e - forms** portal, **JetForm** is extending the use of this technology to any individual Web user, regardless of the source of the form. For example, a financial institution can now instantly serve its customers with public-use Web forms. This is the **Internet** 's first method of providing compliant and intelligent electronic forms that are fully integrated with leading digital and digitized signature products at no cost to end-users.

INTERNET STRATEGY ALREADY AT WORK

Already, three major US-based financial services organizations are moving into production of web-based applications using **JetForm** technology. Each of these companies expects to gain significant competitive advantages and in partnership with **JetForm** will announce these applications upon roll-out.

Open, Secure 'FormFlow 99 Public-Use Web Forms' Leverage XML,
Electronic Signatures to Create Legal, Lightweight, Portable Signed Records
of Fact Responds to 'Government Paperwork Elimination Act of 1998'
Targeting Thousands

Of Government Forms and Billions of Public Responses
Announcement Summary

-- JetForm today announced a new major technology initiative that
enables government agencies to design, deploy, and maintain FormFlow 99
electronic forms for use by the public interacting with government
agencies .

-- There is no license cost to those using these forms, and there is
no additional cost (regardless of the number of forms deployed or responses
received) to the government agency beyond the initial cost of FormFlow
Design.

-- These e - forms are very simple for the public to use. Except for
a standard HTTP Web browser, no additional client software downloads or
"plug- ins" are required.

-- FormFlow 99's unique implementation of XML and electronic signature
support, means that public responses are authenticated, non-reputable, take
very little storage, and are legally binding records of fact.

WASHINGTON, Jan. 11 /PRNewswire/ -- JetForm (R) Corporation (Nasdaq:
FORMF, Toronto: JFM), the global leader in workflow and electronic forms
solutions, today announced "FormFlow(R) 99 Public-Use Web Forms," that will
enable the general public to file government forms through the Internet
-- without downloading any additional software or browser plug-ins.

There is no cost to the public to use these e - forms and there is
no additional cost to the government agency beyond the initial cost of
FormFlow Design. The public can also print blank versions of these forms to
complete and file by traditional means as well.

The initiative is designed to help federal agencies implement an "e-
government " model of service that lowers public burden. It also helps
these agencies respond to the "Government Paperwork Elimination Act of
1998" that was signed into U.S. law in October. Currently, there are
thousands of different government forms -- such as tax forms, financial
filings, compliance reports, and other forms -- that generate several
billion responses from the public each year.

"Many U.S. government agencies -- such as the Department of
Defense and the U.S. Postal Service are already very familiar with the
power, productivity, and sophistication of FormFlow, which for years has
helped automate inter and intra- Agency workflows," said Phil Weaver,
chief operating officer and executive vice president for JetForm . "With
this initiative, we are taking these e-form benefits to all U.S. citizens
who file forms with the government . FormFlow 99 Public-Use Web Forms will
enable our government customers to Web-enable their forms -- without
compromises and tradeoffs that the market has previously presented. We are
proud to offer a solution that goes a long way in fulfilling the vision of
the Government Paperwork Elimination Act of 1998."

The bill will allow employers to electronically collect, store and
file employee federal forms. The impact of this law, as stated by Bob
Wayman, Hewlett-Packard's Chief Financial Officer is, "Congress has the
opportunity to bring the U.S. Government in step with the technological
age by enabling companies to use digital signatures for filing employee
forms with federal agencies . Companies large and small would benefit from
replacing paper copies and postage with a simple and cost-effective
electronic form. For Hewlett- Packard, the savings would be \$1 million per
year for just one form: the W-4 (dependent declaration tax form for

taxes)."

JetForm offers its **government** customers the option of integrating with several different digital certificate vendors' solutions to implement secure transactions over the Web, and supports technology from Entrust Technologies, Inc. and VeriSign, Inc., among others.

"The digital signature technology within Entrust's industry-leading PKI provides secure and trusted authentication for **government agencies** as they turn to the Web for cost-effective, efficient electronic communications," said John Ryan, president and CEO, Entrust Technologies Inc. "Our partnership with **JetForm**, and our established presence in multiple **government agencies**, assures users of FormFlow 99 Public-Use Web Forms that they are dealing with best-of-breed security technology when sending data over the **Internet** to the **government**."

"VeriSign's industry-leading PKI and digital signature solutions are enabling **government agencies** and corporations to conduct secure electronic transactions over the **Internet**," said Nick Piazzola, vice president of VeriSign's Federal Markets Division. "Responding to the **Government Paperwork Elimination Act**, the integration of VeriSign OnSite with FormFlow 99 provides cost-effective, robust security for electronic forms-based transactions with the **government**."

The new FormFlow 99 Public-Use Web Forms option enables federal **agencies** to deploy simple, rich **e-forms** to users who can complete, print, and electronically file legally binding forms from within a Web browser.

FormFlow 99 leverages XML, providing several unique and significant benefits to **agencies** and users alike:

- No software on the client machine -- No plug-ins, add-ins, or other client software is needed to fill, print, or file a FormFlow 99 Public-Use Web Form. The browser alone is sufficient for all functionality.

- Support for unknown users -- FormFlow 99 Web Forms will work from any popular HTTP Web browser. No advance registration or loading is required.

- Substantially identical to paper form -- FormFlow 99 Public-Use Web Forms appear on screen just like paper counterparts. They can include logos, fonts, and other graphical elements.

- Legally Compliant and Binding -- FormFlow 99 breaks down the form into three pieces: the blank form template, form data, and form document. This allows the form to be lightweight while active (moving through the **agency** for reviews and approvals), but totally locked when representing a signed record of fact.

For **government agencies** looking to further automate **government services**, **JetForm** also offers an automated process engine called **JetForm InTempo**®. InTempo allows data captured by web forms to be integrated with **government** systems creating streamlined workflows that improve service, delivery and response time.

Platforms, Pricing, and Availability

JetForm FormFlow 99 -- including the new Public-Use Web Forms -- is available for Windows 95/98 and Windows NT 4.0 from **JetForm** and its authorized resellers and distributors. Minimum system requirements for the FormFlow Designer are a Pentium 90MHz-based PC, 16 MB RAM, and 12 MB of disk space. Minimum requirements for Public-Use Web Forms are the ability to run Netscape Navigator or Microsoft **Internet Explorer**. Users may access FormFlow 99 Public-Use Web Forms at no charge. For additional details, call **JetForm** at 1-800-267-9976 or visit the web site at www.jetform.com.
